#### Abstract

In this paper, we introduce the concept of vertex-edge domination polynomial for any Graph. The vertex-edge domination polynomial of a graph $G$ of order $n$ is the polynomia $D_{v e}(G, x)=\sum_{i=\gamma_{\mathrm{ve}}(\mathrm{G})}^{|\mathrm{V}(\mathrm{G})|} d_{v e}(G, i) x^{i}$, where $d_{v e}(G, i)$ is the number of vertex-edge dominating sets of $G$ of size $i$, and $\gamma_{v e}(G)$ is the vertex-edge domination number of $G$. We obtain some properties of $D_{v e}(G, x)$ and its co-efficients. Also, we find the vertex-edge domination polynomial for the complete Graph $K_{n}, G$ o $K_{1}$ and $G o K_{2}$.

Keywords: Vertex-edge dominating sets, vertex-edge domination number, vertex-edge domination polynomial.

## 1. INTRODUCTION

Let $G=(V, E)$ be a Graph. For any vertex $v \in V$, the open neighbourhood of $v$ is the set $N(v)=\{u \in V \mid u v \in E\}$ and the closed neighbourhood of v is the set $\mathrm{N}[\mathrm{v}]=\mathrm{N}(\mathrm{v}) \cup\{\mathrm{v}\}$. For a set $\mathrm{S} \subseteq \mathrm{V}$, the open neighbourhood of S is $\mathrm{N}(\mathrm{S})=\bigcup_{\mathrm{v} \in \mathrm{S}} N(v)$ and the closed neighbourhood of S is $\mathrm{N}[\mathrm{S}]=\mathrm{N}(\mathrm{S}) \cup \mathrm{S}$. A set S of vertices in a Graph G is said to be a dominating set if every vertex $u \in V$ is either an element of $S$ or is adjacent to an element of $S$. The minimum cardinality of a dominating set of G is said to be domination number and is denoted by $\gamma(\mathrm{G})$.

A set $S$ of vertices in a Graph $G$ is said to be a vertex-edge dominating set, if for every edge $e \in E(G)$, there exists a vertex $v \in S$ such that $v$ dominates e. In other words, for a Graph $G=(V, E)$, a vertex $u \in V(G)$ vertex-edge dominates an edge $v w \in E(G)$ if (i) $u=v$ or $u=w$ ( $u$ is incident to $v w$ ), or (ii) $u v$ or $u w$ is an edge in $G$ ( $u$ is incident to an edge is adjacent to vw).

The minimum cardinality of a vertex-edge dominating set of $G$ is called vertex-edge domination number of $G$, and is denoted by $\gamma_{\mathrm{ve}}(\mathrm{G})$.

The join of two Graphs $G_{1}$ and $G_{2}$, denoted by $G_{1} \vee G_{2}$ is a graph with the vertex set $V=V_{1} \cup V_{2}$ and edge set $E_{1} \cup E_{2}$ $\cup\left\{u v \mid u \in V_{1}\right.$ and $\left.v \in V_{2}\right\}$. The corona of two graphs $G_{1}$ and $G_{2}$ is the graph $G=G_{1}$ o $G_{2}$ formed from one copy of $G_{1}$ and $\left|V\left(G_{1}\right)\right|$ copies of $G_{2}$, where the $i^{\text {th }}$ vertex of $G_{1}$ is adjacent to every vertex in the $i^{\text {th }}$ copy of $G_{2}$. A graph is an empty graph if it contains no edges.

## 2. INTRODUCTION TO VERTEX-EDGE DOMINATION POLYNOMIAL

In this section, we are going to state the definition of vertex-edge domination polynomial and derive some properties.
Definition: 2. 1 Let $D_{v e}(G, i)$ be the family of vertex-edge dominating sets of a graph $G$ with cardinality $i$ and let $d_{\text {ve }}(G, i)=\left|D_{\text {ve }}(G, i)\right|$. Then the vertex-edge domination polynomial, $D_{\text {ve }}(G, x)$ of $G$ is defined as

Corresponding author: ${ }^{1}$ A. Vijayan*<br>${ }^{1}$ Associate Professor, Department of Mathematics, Nesamony Memorial Christian College, Marthandam, Tamil Nadu, India.<br>E-mail: naacnmccm@gmail.com

$$
\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)=\sum_{i=\gamma_{\mathrm{ve}}(G)}^{|\mathrm{V}(\mathrm{G})|} d_{\mathrm{ve}}(G, i) x^{i},
$$

where $\gamma_{\mathrm{ve}}(\mathrm{G})$ is the vertex-edge domination number of $G$.
Example: 2.2 Consider $\mathrm{K}_{4}$

Vertex-edge dominating sets of cardinality 1 are $\{1\},\{2\},\{3\},\{4\}$.
$\therefore \mathrm{K}_{4}$ has 4 vertex-edge dominating sets of cardinality 1 and $\gamma_{\mathrm{ve}}\left(\mathrm{K}_{4}\right)=1$
Vertex-edge dominating sets of cardinality 2 are $\{1,2\},\{1,3\},\{1,4\},\{2,3\},\{2,4\},\{3,4\}$.
$\therefore \mathrm{K}_{4}$ has 6 vertex-edge dominating sets of cardinality 2
Vertex-edge dominating sets of cardinality 3 are $\{1,2,3\},\{1,2,4\},\{1,3,4\},\{2,3,4\}$.
$\therefore \mathrm{K}_{4}$ has 4 vertex-edge dominating sets of cardinality 3 .
Vertex-edge dominating sets of cardinality 4 is $\{1,2,3,4\}$
$\therefore \mathrm{K}_{4}$ has 1 vertex-edge dominating set of cardinality 4 .
$\therefore$ The vertex-edge domination polynomial is
$\mathrm{D}_{\mathrm{ve}}\left(\mathrm{K}_{4}, x\right)=\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{K}_{4}\right)}^{\left|\mathrm{K}_{4}\right|} d_{v e}\left(K_{4}, i\right) x^{i}$
$=\sum_{i=1}^{4} d_{v e}\left(K_{4}, i\right) x^{i}$
$=\mathrm{d}_{\mathrm{ve}}\left(\mathrm{K}_{4}, 1\right) x^{1}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{K}_{4}, 2\right) x^{2}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{K}_{4}, 3\right) x^{3}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{K}_{4}, 4\right) x^{4}$
$=4 x^{1}+6 x^{2}+4 x^{3}+1 . x^{4}$
$=x^{4}+4 x^{3}+6 x^{2}+4 x+1-1$
$=(1+x)^{4}-1$
Theorem: 2.2 If $G$ is a Graph without isolated vertices, consisting of two components $G_{1}$ and $G_{2}$, then $\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)=\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)$.

Proof: Let $\mathrm{G}_{1}$ and $\mathrm{G}_{2}$ be the components of a Graph G without isolated vertices. Let the vertex-edge domination number of $G_{1}$ and $G_{2}$ be $\gamma_{v e}\left(G_{1}\right)$ and $\gamma_{v e}\left(G_{2}\right)$. For any $k \geq \gamma_{v e}(G)$, the vertex-edge dominating set of $k$ vertices in $G$ arises by choosing a vertex-edge dominating set of $j$ vertices of $G_{1}$ and a vertex-edge dominating set of $k$ - $j$ vertices in $G_{2}$.

The number of vertex-edge dominating sets in $G_{1} \cup G_{2}$ is equal to the coefficient of $x^{k}$ in $D_{\text {ve }}\left(G_{1}, x\right)$. $D_{\text {ve }}\left(G_{2}, x\right)$. The number of vertex-edge dominating sets of $G$ is the co-efficient of $x^{k}$ in $D_{v e}(G, x)$.

Hence the co-efficient of $x^{k}$ in $\mathrm{D}_{\text {ve }}(\mathrm{G}, x)$ and $\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\text {ve }}\left(\mathrm{G}_{2}, x\right)$ are equal.
$\therefore \mathrm{D}_{\text {ve }}(\mathrm{G}, x)=\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\text {ve }}\left(\mathrm{G}_{2}, x\right)$.
Theorem: 2.3 If $G$ is a Graph without isolated vertices consists of $m$ components $G_{1}, G_{2}, \ldots, G_{m}$. Then $\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)=\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\text {ve }}\left(\mathrm{G}_{2}, x\right) \ldots \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{\mathrm{m}}, x\right)$.

Proof: The proof of the theorem follows from theorem 2.2.

## ${ }^{1}$ A. Vijayan* and ${ }^{2}$ T. Nagarajan/Vertex- Edge Domination Polynomials Of Graphs / IJMA- 5(2), Feb.-2014.

Example: 2.4 Consider the graph given in figure 1.

Figure 1
$\gamma_{\mathrm{ve}}(\mathrm{G})=\gamma_{\mathrm{ve}}\left(\mathrm{G}_{1}\right)+\gamma_{\mathrm{ve}}\left(\mathrm{G}_{2}\right)=1+1=2$ a vertex-edge dominating sets of $\mathrm{k}=2$ vertices in G arises by choosing a vertex-edge dominating set of $\mathrm{j}=1$ in $\mathrm{G}_{1}(\mathrm{j} \in\{1,2,3,4\})$ and a vertex edge dominating set $\mathrm{k}-\mathrm{j}=2-1=1$ vertex in $G_{2}$

$$
\begin{aligned}
\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right) & =\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{G}_{1}\right)}^{\left.\mathrm{V}_{1}\right) \mid} d_{v e}\left(G_{1}, i\right) x^{i} \\
& =\sum_{i=1}^{4} d_{v e}\left(G_{1}, i\right) x^{i} \\
& =\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{1}, 1\right) x^{1}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{1}, 2\right) x^{2}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{1}, 3\right) x^{3}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{1}, 4\right) x^{4} \\
& =2 x+6 x^{2}+4 x^{3}+x^{4} \\
& =x^{4}+4 x^{3}+6 x^{2}+2 x
\end{aligned}
$$

$$
\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)=\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{G}_{2}\right)}^{\left|\mathrm{V}\left(\mathrm{G}_{2}\right)\right|} d_{v e}\left(G_{2}, i\right) x^{i}
$$

$$
=\sum_{i=1}^{4} d_{v e}\left(G_{2}, i\right) x^{i \mathrm{i}}
$$

$$
=\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{2}, 1\right) x^{1}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{2}, 2\right) x^{2}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{2}, 3\right) x^{3}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}_{2}, 4\right) x^{4}
$$

$$
=4 x^{1}+6 x^{2}+4 x^{3}+x^{4}
$$

$$
=x^{4}+4 x^{3}+6 x^{2}+4 x
$$

$$
\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)=\left(x^{4}+4 x^{3}+6 x^{2}+2 x\right) \times\left(x^{4}+4 x^{3}+6 x^{2}+4 x\right)
$$

Coefficient of $x^{2}$ in $\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\text {ve }}\left(\mathrm{G}_{2}, x\right)$ is

$$

Coefficient of $x^{3}$ in $\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)=6 \times 4=24$

## ${ }^{1}$ A. Vijayan* and ${ }^{2}$ T. Nagarajan/Vertex- Edge Domination Polynomials Of Graphs / IJMA- 5(2), Feb.-2014.

$$
\begin{aligned}
& \mathrm{G}=\mathrm{G}_{1} \cup \mathrm{G}_{2} \\
& \mathrm{~d}_{\mathrm{ve}}(\mathrm{G}, 3)=\{\{1,2,5\},\{1,2,6\},\{1,2,7\},\{1,2,8\},\{1,3,5\},\{1,3,6\},\{1,3,7\}, \\
&\{1,3,8\},\{1,4,5\},\{1,4,6\},\{1,4,7\},\{1,4,8\},\{2,3,5\},\{2,3,6\}, \\
&\{2,3,7\},\{2,3,8\},\{2,4,5\},\{2,4,6\},\{2,4,7\},\{2,4,8\},\{3,4,5\}, \\
&=\{3,4,6\},\{3,4,7\},\{3,4,8\}\} .
\end{aligned}
$$

$\therefore$ The coefficient of $x^{3}$ in $\mathrm{D}_{\text {ve }}(\mathrm{G}, x)$ is 24
$\therefore \quad \mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)=\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right) . \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)$
Theorem: 2.5 If $G_{1}$ and $G_{2}$ are Graphs of order $n_{1}$ and $n_{2}$ respectively, then

$$
\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1} \vee \mathrm{G}_{2}, x\right)=\left[\left((1+x)^{\mathrm{n} 1}-1\right)\left((1+x)^{\mathrm{n} 2}-1\right)\right]+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)
$$

Proof: From the definition of $G_{1} \vee G_{2}$, if $D_{1}$ is any vertex-edge domination set of $G_{1}$, then $D_{1}$ is a vertex-edge domination set of $G_{1} \vee G_{2}$. Similarly, if $D_{2}$ is any vertex-edge domination set of $G_{2}$, then $D_{2}$ is a vertex-edge domination set of $G_{1} \vee G_{2}$.

Also, the sets consist of any one vertex of $G_{1}$ and any one vertex of $G_{2}$, forms the vertex-edge Dominating sets of $\mathrm{G}_{1} \vee \mathrm{G}_{2}$ of cardinality two. There are $\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{1}$ such sets. Similarly, the number of vertex-edge dominating sets of cardinality three other than the first two cases is $\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{2}+\binom{\mathrm{n}_{2}}{1}\binom{\mathrm{n}_{1}}{2}$.

Proceeding like this, we obtain the other vertex-edge dominating sets of cardinality $\mathrm{n}_{1}+\mathrm{n}_{2}$.
Therefore, $\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1} \vee \mathrm{G}_{2}, x\right)=\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)+\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{1} x^{2}+\left[\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{2}+\binom{\mathrm{n}_{1}}{2}\binom{\mathrm{n}_{2}}{1}\right] x^{3}$

$$
\begin{aligned}
& +\left[\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{3}+\binom{\mathrm{n}_{1}}{2}\binom{\mathrm{n}_{2}}{2}+\binom{\mathrm{n}_{1}}{3}\binom{\mathrm{n}_{2}}{1}\right] x^{4} \\
& +\ldots+\left[\binom{\mathrm{n}_{1}}{1}\binom{\mathrm{n}_{2}}{\mathrm{n}_{1}+\mathrm{n}_{2-1}}+\ldots+\binom{\mathrm{n}_{2}}{\mathrm{n}_{1}+\mathrm{n}_{2-1}}\binom{\mathrm{n}_{2}}{1}\right] x^{\mathrm{n} 1}+{ }^{\mathrm{n} 2} \\
& \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)+\left[\binom{\mathrm{n}_{1}}{1} x+\binom{\mathrm{n}_{2}}{2} x^{2}+\ldots+\binom{\mathrm{n}_{1}}{\mathrm{n}_{1}} x^{\mathrm{n}_{1}}\right] \\
& \times\left[\binom{\mathrm{n}_{2}}{1} x+\binom{\mathrm{n}_{2}}{2} x^{2}+\ldots+\binom{\mathrm{n}_{2}}{\mathrm{n}_{2}} x^{\mathrm{n}_{2}}\right]
\end{aligned}
$$

$$
=\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)
$$

$$
+\left[\binom{\mathrm{n}_{1}}{0}+\binom{\mathrm{n}_{1}}{1} x+\binom{\mathrm{n}_{1}}{2} x^{2}+\ldots+\binom{\mathrm{n}_{1}}{\mathrm{n}_{1}} x^{\mathrm{n}_{1}}-\binom{\mathrm{n}_{1}}{0}\right]
$$

$$
\times\left[\binom{\mathrm{n}_{2}}{0}+\binom{\mathrm{n}_{2}}{1} x+\binom{\mathrm{n}_{2}}{2} x^{2}+\ldots+\binom{\mathrm{n}_{2}}{\mathrm{n}_{2}} x^{\mathrm{n}_{2}}-\binom{\mathrm{n}_{2}}{0}\right]
$$

$\therefore \mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, \vee \mathrm{G}_{2}, x\right)=\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\text {ve }}\left(\mathrm{G}_{2}, x\right)+\left[(1+x)^{\mathrm{n} 1}-1\right]\left[(1+x)^{\mathrm{n} 2}-1\right]$
$\therefore \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1} \vee \mathrm{G}_{2}, x\right)=\left[(1+x)^{\mathrm{n} 1}-1\right]\left[(1+x)^{\mathrm{n} 2}-1\right]+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{1}, x\right)+\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}_{2}, x\right)$

## 3. CO-EFFICIENT OF VERTEX-EDGE DOMINATION POLYNOMIAL

Theorem: 3.1 Let $G$ be a graph with $|\mathrm{V}(\mathrm{G})|=\mathrm{n}$. Then
(i) If $G$ is connected, then $d_{v e}(G, n)=1$ and $d_{v e}(G, n-1)=n$.
(ii) $\mathrm{d}_{\mathrm{ve}}(\mathrm{G}, \mathrm{i})=0$ iff $\mathrm{i}<\gamma_{\mathrm{ve}}(\mathrm{G})$ or $\mathrm{i}>\mathrm{n}$.
(iii) $\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)$ has no constant term.
(iv) $\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)$ is a strictly increasing function in $[0, \infty)$.
(v) Let $G$ be a Graph and $H$ be any induced subgraph of $G$. Then, $\operatorname{deg}\left(\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, \mathrm{x})\right) \geq \operatorname{deg}\left(\mathrm{D}_{\mathrm{ve}}(\mathrm{H}, x)\right)$
(vi) Zero is a root of $D_{\mathrm{ve}}(\mathrm{G}, x)$ with multiplicity $\gamma_{\mathrm{ve}}(\mathrm{G})$.

## Proof:

(i) Since $G$ has $n$ vertices, there is only one way to choose all these vertices and it dominates all the vertices and edges. Therefore, $\mathrm{d}_{\mathrm{ve}}(\mathrm{G}, \mathrm{n})=1$. If we delete one vertex v , the remaining $\mathrm{n}-1$ vertices dominate all the vertices and edges of $G$. (This is done in n ways). Therefore, $d_{v e}(G, n-1)=n$.
(ii) Since $D_{\text {ve }}(G, i)=\phi$ if $i<\gamma_{v e}(G)$ or $D_{v e}(G, n+k)=\phi, k=1,2, \ldots$

Therefore, we have $\mathrm{d}_{\mathrm{ve}}(\mathrm{G}, \mathrm{i}) \square=0$ if $\mathrm{i}<\gamma_{\mathrm{ve}}(\mathrm{G})$ or $\mathrm{i}>\mathrm{n}$
Conversely, if $\mathrm{i}<\gamma_{\mathrm{ve}}(\mathrm{G})$ or $\mathrm{i}>\mathrm{n}, \mathrm{d}_{\mathrm{ve}}(\mathrm{G}, \mathrm{i})=0$.Hence the result.
(iii) Since $\gamma_{\mathrm{ve}}(G) \geq 1$, the vertex-edge domination polynomial has no term of degree 0 . Therefore, it has no constant term. The proof of (iv) follows from the definition of vertex-edge domination polynomial.
(v) We have deg $\left(\mathrm{D}_{\mathrm{ve}}(\mathrm{H}, x)\right)=$ Number of vertices in $H$, Also, deg $\left(\mathrm{D}_{\mathrm{ve}}(\mathrm{G}, x)\right)=$ Number of vertices in $G$ since Number of vertices in $H \leq$ Number of vertices in $G$,
$\operatorname{deg}\left(D_{\text {ve }}(H, x)\right) \leq \operatorname{deg}\left(D_{\text {ve }}(G, x)\right)$

## 4. Vertex-edge Domination Polynomial of G o K $\mathbf{K}_{1}$

Lemma: 4.1 Let $G$ be an empty graph of order $n$. Then, $\gamma_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}\right)=\mathrm{n}$
Proof: Since $G$ has $n$ vertices, $G$ o $K_{1}$ has $2 n$ vertices. Let $V(G)=\left\{u_{1}, u_{2}, \ldots u_{n}\right\}$. Clearly $\left\{u, u_{2}, \ldots, u_{n}\right\}$ is the minimal vertex-edge dominating set of G o $\mathrm{K}_{1}$.

Therefore, $\gamma_{\mathrm{ve}}\left(\mathrm{G} \circ \mathrm{K}_{1}\right)=\mathrm{n}$
Example: 4.2
(Empty graph with 3 vertices)

There are three vertices required to cover all the vertices and edges of $G$ o $K_{1}$.
Therefore, Minimum cardinality $=3$

$$
\gamma_{\mathrm{ve}}\left(\mathrm{G} \circ \mathrm{~K}_{1}\right)=3
$$

Example: 4.3 Let $G$ be a complete Graph with $n$ vertices. First, let $n=1$.

$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}, 1\right)=2$
$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}, 2\right)=1$

$$
\begin{aligned}
& \left|\mathrm{V}\left(\mathrm{GoK}_{1}\right)\right| \\
& \therefore \mathrm{D}_{\mathrm{ve}}\left(\mathrm{Go} \mathrm{~K} \mathrm{~K}_{1}, x\right)=\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{GoK}_{1}\right)} d_{v e}\left(G o K_{1}, i\right) x^{i} \\
& =\sum_{i=1}^{2} d_{v e}\left(\text { GoK }_{1}, i\right) x^{i} \\
& =\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \text { o } \mathrm{K}_{1}, 1\right) x^{1}+\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \text { o } \mathrm{K}_{1}, 2\right) x^{2} \\
& =2 x+x^{2} \\
& =(1+x)^{2}-1 \\
& =(1+x)^{2}-\binom{1}{0}
\end{aligned}
$$

Let $\mathrm{n}=2$,

$$
{\stackrel{\bullet}{\mathrm{K}_{1}}}^{\mathbf{~}}
$$

GoK
$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \circ \mathrm{K}_{1}, 1\right)=2$
$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}, 2\right)=6$
$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \circ \mathrm{K}_{1}, 3\right)=4$
$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}, 4\right)=1$

$$
\begin{aligned}
\therefore \mathrm{D}_{\mathrm{ve}}\left(\mathrm{Go} \mathrm{~K}_{1}, x\right) & =\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{GoK}_{1}\right)}^{\left|\mathrm{V}\left(\mathrm{GoK}_{1}\right)\right|} d_{v e}\left(\text { GoK K }_{1}, i\right) x^{i} \\
& =\sum_{i=1}^{4} d_{v e}\left(G o K_{1}, i\right) x^{i} \\
& =2 x+6 x^{2}+4 x^{3}+x^{4} \\
& =(1+x)^{4}-(2 x+1) \\
& =(1+x)^{4}-\left(\binom{2}{1} x+\binom{2}{0}\right)
\end{aligned}
$$

$n=3$,

$\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \circ \mathrm{K}_{1}, 1\right)=3$

& =5 x+35 x^{2}+110 x^{3}+205 x^{4}+252 x^{5}+210 x^{6}+120 x^{7}+45 x^{8}+10 x^{9}+x^{10} \\
& =(1+x)^{10}-\left(5 x^{4}+10 x^{3}+10 x^{2}+5 x+1\right) \\
& =(1+x)^{10}-\left(\binom{5}{4} x^{4}+\binom{5}{3} x^{3}+\binom{5}{2} x^{2}+\binom{5}{1} x+\binom{5}{0}\right)
\end{aligned}
$$

Now, we generalize the vertex-edge domination polynomial of $G$ o $K_{1}$, where $G$ is the complete graph with $n$ vertices as

$$
\left.\begin{array}{rl}
\mathrm{D}_{\mathrm{ve}}(\mathrm{Go} \mathrm{~K} & 1, x)
\end{array}=(1+x)^{2 \mathrm{n}}-\left(\binom{\mathrm{n}}{0}+\binom{\mathrm{n}}{1} x+\ldots+\binom{\mathrm{n}}{\mathrm{n}-1} x^{n-1}\right)\right)
$$

Theorem: 4.4 G is a complete Graph of order n. We have

$$
\mathrm{d}_{\mathrm{ve}}\left(\mathrm{G} \text { o } \mathrm{K}_{1}, \mathrm{r}\right)=\left\{\begin{array}{l}
\left(\begin{array}{c}
2 \mathrm{n} \\
\mathrm{r} \\
2 \mathrm{n} \\
\mathrm{r}
\end{array}\right),-\binom{\mathrm{n}}{\mathrm{r}}, \mathrm{r} \geq \mathrm{n}
\end{array}\right.
$$

Hence, $\quad \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}, x\right)=(1+x)^{2 \mathrm{n}}-\sum_{r=0}^{n-1}\binom{\mathrm{n}}{\mathrm{r}} X^{r}$.
Proof: Since $G$ has $n$ vertices, $G$ o $K_{1}$ has $2 n$ vertices. One vertex of $G$ o $K_{1}$ is enough to cover all the vertices and edges of G o $\mathrm{K}_{1}$. Therefore the minimum cardinality is one.

## ${ }^{1}$ A. Vijayan* and ${ }^{2}$ T. Nagarajan/ Vertex-Edge Domination Polynomials Of Graphs / IJMA- 5(2), Feb.-2014.

Therefore, $\gamma_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}\right)=1$. If $\mathrm{r}<\mathrm{n}$, then the $\mathrm{V}(\mathrm{G})=\left\{\mathrm{u}_{1} \ldots \mathrm{u}_{\mathrm{n}}\right\}$ and $\mathrm{V}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{1}\right)=\left\{\mathrm{u}_{1} \ldots \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1} \ldots \mathrm{v}_{\mathrm{n}}\right\}$ consists of any $r$ vertices from $\left\{\mathrm{u}_{1} \ldots \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1} \ldots \mathrm{v}_{\mathrm{n}}\right\}$ excluding sets having any r vertices from $\left\{\mathrm{v}_{1} \ldots \mathrm{v}_{\mathrm{n}}\right\}$.

Thus, If $r<n$, then the vertex-edge dominating sets of $G$ o $K_{1}$ is $\binom{2 n}{r}-\binom{n}{r}$.
$\therefore$ The number of vertex - edge dominating sets is $\binom{2 n}{r}-\binom{n}{r}$. Let $r \geq n$, we know that any set of $n$ vertices in $\left\{\mathrm{u}_{1}, \mathrm{u}_{2}, \ldots \ldots \mathrm{u}_{\mathrm{n}}, \mathrm{v}_{1}, \mathrm{v}_{2} \ldots \mathrm{v}_{\mathrm{n}}\right\}$ is a vertex-edge dominating set of $\mathrm{Go} \mathrm{K}_{1}$. Then the number of vertex-edge dominating sets of $G$ o $K_{1}$ is $\binom{2 n}{r}$.

$$
\begin{aligned}
& \mathrm{D}_{\mathrm{ve}}\left(\mathrm{G} \text { o } \mathrm{K}_{1}, x\right)=\sum_{i=\gamma_{\mathrm{ve}}\left(\mathrm{GoK}_{1}\right)}^{\left|\mathrm{V}\left(\mathrm{GoK}_{1}\right)\right|} d_{v e}\left(\text { GoK }_{1}, r\right) x^{r} \\
& =\sum_{\mathrm{r}=1}^{2 n} d_{v e}\left(G o K_{1}, r\right) x^{r} \\
& =\sum_{\mathrm{r}=1}^{n-1} d_{v e}\left(\text { GoK }_{1}, r\right) x^{r}+\sum_{\mathrm{r}=\mathrm{n}}^{2 n} d_{v e}\left(\text { GoK }_{1}, r\right) x^{r} \\
& =\sum_{\mathrm{r}=1}^{n-1}\left[\binom{2 \mathrm{n}}{\mathrm{r}}-\binom{\mathrm{n}}{\mathrm{r}}\right] x^{\mathrm{r}}+\sum_{\mathrm{r}=\mathrm{n}}^{2 n}\binom{2 \mathrm{n}}{\mathrm{r}} x^{\mathrm{r}} \\
& =\left[\binom{2 \mathrm{n}}{1}-\binom{\mathrm{n}}{1}\right] x^{1}+\left[\binom{2 \mathrm{n}}{2}-\binom{\mathrm{n}}{2}\right] x^{2}+\ldots+ \\
& {\left[\binom{2 n}{n-1}-\binom{n}{n-1}\right] x^{n-1}+\binom{2 n}{n} x^{n}+\binom{2 n}{n+1} x^{n+1}+\ldots+\binom{2 n}{2 n} x^{2 n}} \\
& =\binom{2 \mathrm{n}}{1} x^{1}+\binom{2 \mathrm{n}}{2} x^{2}+\binom{2 \mathrm{n}}{3} x^{3}+\ldots+\binom{2 \mathrm{n}}{\mathrm{n}} x^{\mathrm{n}}+\binom{2 \mathrm{n}}{\mathrm{n}+1} x^{\mathrm{n}+1}+\ldots+\binom{2 \mathrm{n}}{2 \mathrm{n}} x^{2 \mathrm{n}} \\
& -\left(\binom{\mathrm{n}}{1} x^{1}+\binom{\mathrm{n}}{2} x^{2}+\ldots+\binom{\mathrm{n}}{\mathrm{n}-1} x^{\mathrm{n}-1}\right)=\binom{2 \mathrm{n}}{0}+\binom{2 \mathrm{n}}{1} x^{1}+\binom{2 \mathrm{n}}{2} x^{2}+\binom{2 \mathrm{n}}{3} x^{3} \\
& +\ldots+\binom{2 \mathrm{n}}{\mathrm{n}} x^{\mathrm{n}}+\binom{2 \mathrm{n}}{\mathrm{n}+1} x^{\mathrm{n}+1}+\ldots+\binom{2 \mathrm{n}}{2 \mathrm{n}} x^{2 \mathrm{n}}-\left(\binom{\mathrm{n}}{0}+\binom{\mathrm{n}}{1} x^{1}\right. \\
& \left.+\binom{\mathrm{n}}{2} x^{2}+\ldots+\binom{\mathrm{n}}{\mathrm{n}-1} x^{\mathrm{n}-1}\right) \\
& =(1+x)^{2 \mathrm{n}}-\sum_{\mathrm{r}=0}^{n-1}\binom{\mathrm{n}}{\mathrm{r}} x^{\mathrm{r}}
\end{aligned}
$$

## 5. VERTEX-EDGE DOMINATION POLYNOMIAL OF G o K 2

Theorem: 5.1 If G is a complete Graph of order n. we have
$d_{v e}\left(G o K_{2}, r\right)=\left\{\begin{array}{l}\binom{3 n}{r}-\binom{n}{1}\binom{3 n-3}{r}+\binom{n}{2}\binom{3 n-6}{r}-\ldots+(-1)^{k}\binom{n}{k}\binom{3 n-3 k}{r} \\ k \text { is the largest integer satisfying } 3 n-3 k \geq r, \text { if } r \leq 3 n-3 \\ \binom{3 n}{r}, \text { if } r>3 n-3\end{array}\right.$
Hence, $\mathrm{D}_{\mathrm{ve}}\left(\mathrm{G}\right.$ o $\left.\mathrm{K}_{2}, x\right)=\left[(1+x)^{3}-1\right]^{\mathrm{n}}$

## ${ }^{1}$ A. Vijayan* and ${ }^{2}$ T. Nagarajan/ Vertex- Edge Domination Polynomials Of Graphs / IJMA-5(2), Feb.-2014.

Proof: Since G has n vertices, G o $\mathrm{K}_{2}$ has $3 n$ vertices. The $n$ vertices of $G$ cover all the vertices and edges of $G$ o $K_{2}$. Therefore, the minimum cardinality of vertex-edge dominating sets is $n$.

$$
\therefore \gamma_{\mathrm{ve}}\left(\mathrm{Go} \mathrm{~K} \mathrm{~K}_{2}\right)=\mathrm{n}
$$

If $r \leq 3 n-3$, then, The number of vertex-edge dominating sets of $G o K_{2}$ of cardinality $r$ is

$$
\binom{3 n}{r}-\binom{n}{1}\binom{3 n-3}{r}+\binom{n}{2}\binom{3 n-6}{r}-\ldots+(-1)^{k}\binom{n}{k}\binom{3 n-3 k}{r}
$$

When $r>3 n-3$, The number of vertex-edge dominating sets of $G$ o $K_{2}$ of cardinality $r$ is $\binom{3 n}{r}$.
Therefore,

$$
\begin{aligned}
& \left.D_{\text {ve }}(G \text { o K } 2, x)=\sum_{r=\gamma_{v e}\left(\sum_{\text {G o K }}^{2}\right)}\right) \mathrm{d}_{\text {ve }}\left(\mathrm{G} \text { o K K } 2 \text {, r) } x^{\mathrm{r}}\right. \\
& =\sum_{r=n}^{3 n} \mathrm{~d}_{\mathrm{ve}}\left(\mathrm{Goo} \mathrm{~K}_{2}, \mathrm{r}\right) x^{\mathrm{r}} \\
& \left.=\sum_{r=1}^{3 n} d_{\text {ve }}\left(G \circ K_{2}, r\right) x^{r} \text { (Since, } d_{\text {ve }}\left(G \circ K_{2}, r\right)=0 \text { for } r=1,2, \ldots, n-1\right) \\
& =\sum_{r=1}^{3 \mathrm{n}-3} \mathrm{~d}_{\mathrm{ve}}\left(\mathrm{G} \text { o K } \mathrm{K}_{2}, \mathrm{r}\right) x^{\mathrm{r}}+\sum_{r=3 \mathrm{n}-2}^{3 \mathrm{n}} \mathrm{~d}_{\mathrm{ve}}\left(\mathrm{Go} \mathrm{~K} \mathrm{~K}_{2}, \mathrm{r}\right) x^{\mathrm{r}} \\
& =\sum_{r=1}^{3 n-3}\left[\binom{3 n}{r}-\binom{n}{1}\binom{3 n-3}{r}+\binom{n}{2}\binom{3 n-6}{r}\right. \\
& \left.-\ldots+(-1)^{\mathrm{k}}\binom{\mathrm{n}}{\mathrm{k}}\binom{3 \mathrm{n}-3 \mathrm{k}}{\mathrm{r}}\right] x^{\mathrm{r}}+\sum_{r=3 \mathrm{n}-2}^{3 \mathrm{n}}\binom{3 \mathrm{n}}{\mathrm{r}} x^{\mathrm{r}} \\
& =\sum_{r=1}^{3 n-3}\binom{3 n}{r} x^{r}-\binom{\mathrm{n}}{1} \sum_{r=1}^{3 n-3}\binom{3 n-3}{r} x^{r}+\binom{n}{2} \sum_{r=1}^{3 n-3}\binom{3 n-6}{r} x^{r} \\
& -\ldots+(-1)^{\mathrm{k}}\binom{\mathrm{n}}{\mathrm{k}} \sum_{r=1}^{3 \mathrm{n}-3}\binom{3 n-3 \mathrm{k}}{\mathrm{r}} x^{\mathrm{r}}+\sum_{\mathrm{r}=3 \mathrm{n}-2}^{3 \mathrm{n}}\binom{3 \mathrm{n}}{\mathrm{r}} x^{\mathrm{r}} \\
& =\binom{3 n}{1} x^{1}+\binom{3 n}{2} x^{2}+\ldots+\binom{3 n}{3 n-3} x^{3 n-3} \\
& -\binom{n}{1}\left[\binom{3 n-3}{1} x^{1}+\binom{3 n-3}{2} x^{2}+\ldots+\binom{3 n-3}{3 n-3} x^{3 n-3}\right] \\
& +\binom{\mathrm{n}}{2}\left[\binom{3 \mathrm{n}-6}{1} x^{1}+\binom{3 \mathrm{n}-6}{2} x^{2}+\ldots \ldots+\binom{3 \mathrm{n}-6}{3 \mathrm{n}-6} x^{3 \mathrm{n}-6}\right] \\
& -\ldots+(-1)^{\mathrm{k}}\binom{\mathrm{n}}{\mathrm{k}}\left[\binom{3 \mathrm{n}-3 \mathrm{k}}{\mathrm{r}} x^{1}+\ldots+\binom{3 \mathrm{n}-3 \mathrm{k}}{3 \mathrm{n}-3 \mathrm{k}} x^{3 \mathrm{n}-3 \mathrm{k}}\right] \\
& +\ldots+\binom{3 n}{3 n-2} x^{3 n-2}+\binom{3 n}{3 n-1} x^{3 n-1}+\binom{3 n}{3 n} x^{3 n} \\
& =1+\binom{3 n}{1} x^{1}+\binom{3 n}{2} x^{2}+\ldots+\binom{3 n}{3 n-3} x^{3 n-3}+ \\
& -1-\binom{\mathrm{n}}{1}\left[1+\binom{3 \mathrm{n}-3}{1} x^{1}+\binom{3 n-3}{2} x^{2}+\ldots+\binom{3 n-3}{3 n-3} x^{3 n-3}-1\right] \\
& +\binom{n}{2}\left[1+\binom{3 n-6}{1} x^{1}+\binom{3 n-6}{2} x^{2}+\ldots+\binom{3 n-6}{3 n-6} x^{3 n-6}-1\right]+\ldots+(-1)^{n}\binom{n}{n}
\end{aligned}
$$

$$
\begin{aligned}
& =(1+x)^{3 \mathrm{n}}-\binom{\mathrm{n}}{1}(1+x)^{3(\mathrm{n}-1)}+\binom{\mathrm{n}}{2}\left((1+x)^{3(\mathrm{n}-2)}\right)-\ldots+(-1)^{\mathrm{n}} \\
& -\left[\binom{n}{0}-\binom{n}{1}+\binom{n}{2}-\ldots+(-1)^{n}\binom{n}{n}\right] \\
& =\left[(1+x)^{3}-1\right]^{\mathrm{n}}-\left[\binom{\mathrm{n}}{0}-\binom{\mathrm{n}}{1}+\binom{\mathrm{n}}{2}-\ldots+(-1)^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{n}}\right] \\
& =\left[(1+x)^{3}-1\right]^{\mathrm{n}}-0 \\
& =\left[(1+x)^{3}-1\right]^{\mathrm{n}} \quad\left(\because\binom{\mathrm{n}}{0}-\binom{\mathrm{n}}{1}+\binom{\mathrm{n}}{2}-\ldots+(-1)^{\mathrm{n}}\binom{\mathrm{n}}{\mathrm{n}}=0\right) \\
& \mathrm{D}_{\text {ve }}\left(\mathrm{G} \text { o K } \mathrm{K}_{2}, x\right)=\left[(1+x)^{3}-1\right]^{\mathrm{n}}
\end{aligned}
$$
